

# SPECIAL RELEASE

## Summary Inflation Report of the Consumer Price Index in La Union: June 2020 (2012=100)

Date of Release: **28 August 2020**  
Reference No. 2020 - 21

### *La Union's CPI remains at 114.7 in June 2020*

The Consumer Price Index (CPI) in La Union in June 2020 remains at 114.7. This means that on the average, prices of goods and services in the province have increased by 14.7 percent from the base year 2012. The province's CPI was recorded at 114.7 in May 2020 and at 112.6 in June 2019.

Meanwhile, Ilocos Region's CPI was recorded at 118.7 and 121.6 in June 2019 and June 2020 respectively, higher than La Union's CPI in said periods.

### *La Union's inflation rate accelerates in June 2020*

La Union's headline inflation picked up by 1.9 percent in June 2020. In May 2020, inflation in the province was recorded at 1.7 percent and in June 2019 at 1.4 percent.

**Figure 1. Headline Inflation Rates in La Union, All Items  
June 2019 – June 2020  
(2012=100)**

In 2020, inflation in La Union was posted at 1.4 percent in January. This rose by 1.5 percent in February and further picked up by 1.8 percent and 2.4 percent in March and

April respectively. Inflation in the province slowed down in May by 1.7 percent but again went up by 1.9 percent in June.

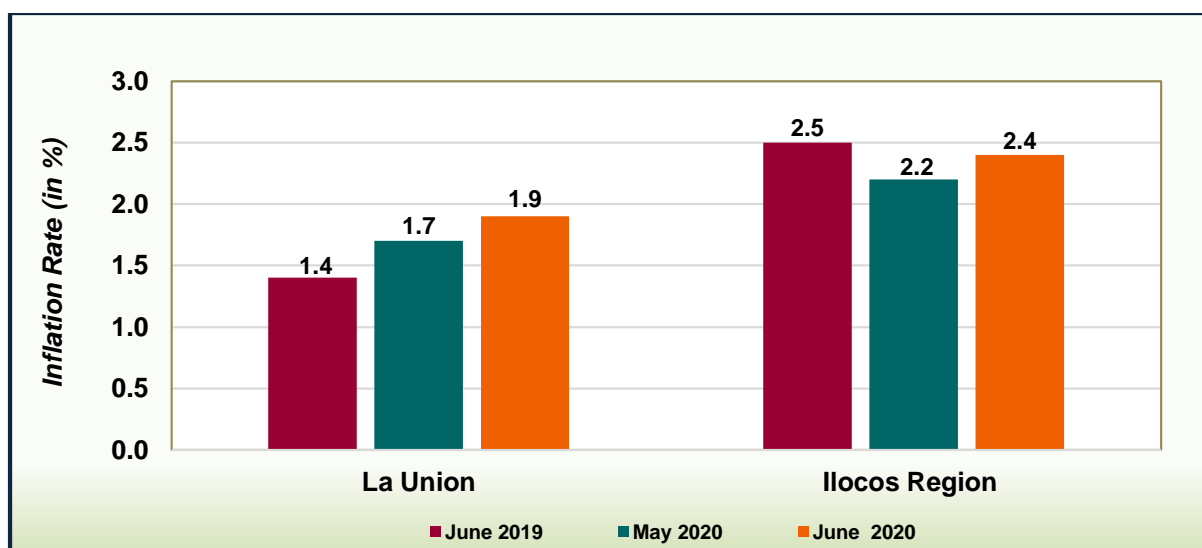

**Table 1. Year-on-Year Inflation Rates in La Union, All Items  
January 2015 – June 2020  
(2012=100)**

Month	Year					
	2015	2016	2017	2018	2019	2020
January	0.7	1.9	0.4	2.5	3.3	1.4
February	-0.6	2.1	0.9	3.1	2.9	1.5
March	0.9	2.0	1.1	2.9	2.8	1.8
April	2.2	-0.8	2.6	2.8	2.3	2.4
May	0.7	-0.5	2.7	2.5	2.5	1.7
June	0.1	-0.1	2.4	3.5	1.4	1.9
July	0.7	-0.4	2.7	3.8	1.5	
August	0.0	-0.4	2.8	5.0	0.5	
September	0.4	-1.1	3.0	6.3	-1.5	
October	0.2	0.0	2.2	6.7	-1.3	
November	-0.1	0.9	1.8	6.2	-0.8	
December	1.5	-0.2	1.5	4.7	1.0	
<b>Average</b>	<b>0.6</b>	<b>0.3</b>	<b>2.0</b>	<b>4.2</b>	<b>1.2</b>	

Source: Philippine Statistics Authority, Price Statistics Division

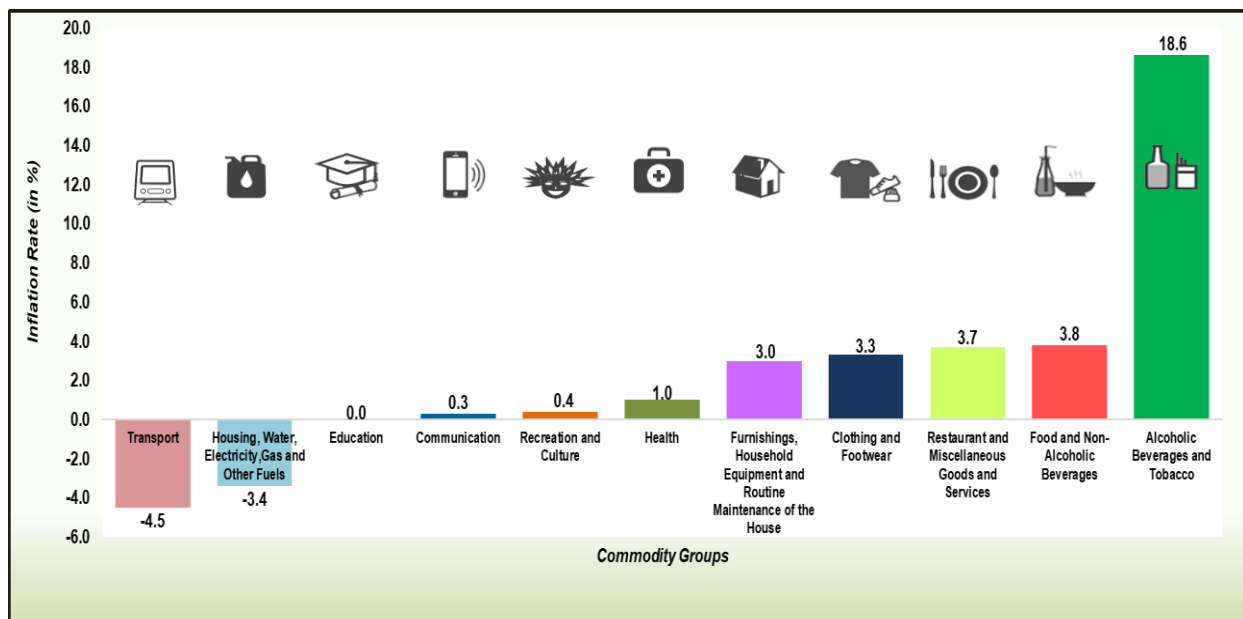

In 2019, the headline inflation in the province was posted at 3.3 percent in January. Inflation continued to ease in February, March, and April at 2.9 percent, 2.8 percent, and 2.3 percent respectively. Inflation accelerated by 2.5 percent in May but slowed down in June at 1.4 percent. It again rose in July at 1.5 percent but decelerated in August at 0.5 percent. Meanwhile, negative annual rates were recorded in September, October, and November at -1.5 percent, -1.3 percent, and -0.8 percent respectively. However, the province's inflation went up 1.0 percent in December.

**Figure 2. Headline Inflation Rates, All Items in La Union and Ilocos Region  
June 2019, May 2020, and June 2020  
(2012=100)**

Meanwhile, Ilocos Region's headline inflation in June 2020 went up by 2.4 percent. Inflation rate in the region a month ago posted at 2.2 percent and in June 2019, at 2.5 percent.

**Figure 3. Inflation Rates by Commodity Groups, La Union: June 2020 (2012=100)**

The uptrend in inflation in the province in June 2020 was contributed by faster annual rates posted in the indices of most of the commodity groups from May to June: alcoholic beverages and tobacco from 16.7 percent to 18.6 percent; housing, water, electricity, gas and other fuels from -3.7 percent to -3.4 percent; furnishings, household equipment and routine maintenance of the house from 2.7 percent to 3.0 percent; health from 0.4 percent to 1.0 percent; transport from -8.5 percent to -4.5 percent; recreation and culture from 0.3 percent to 0.4 percent; and restaurant and miscellaneous goods and services from 3.4 percent to 3.7 percent.

On the other hand, slower annual increments were noted in the indices of food and non-alcoholic beverages from 4.7 percent to 3.8 percent and education from 0.2 percent to 0.0 percent. Meanwhile, the rest of the commodity groups retained their previous month's annual rates.

The inflation in the food alone index decelerated to 3.9 percent in June 2020 from 4.9 percent a month ago. Compared with their annual rates in May 2020, lower annual increases were also observed in the indices of the following food groups in June 2020: meat (6.8% to 6.7%); fish (17.9% to 12.5%); fruits (7.7% to 4.7%); vegetables (2.4% to 1.6%); milk, cheese and eggs (7.0% to 6.7%); sugar, jam, honey, chocolate and confectionery (1.2% to 1.0%); and food products not elsewhere classified (11.9% to 10.8%).

On the contrary, higher annual upticks were noted in the indices of the following food groups: rice (-2.3% to -1.9%); other cereals, flour, cereal preparation, bread, pasta and other bakery products (1.9% to 2.1%) and bread and cereals (-1.3% to -1.1%). Oils and fats index retained its previous month's annual rate of 3.2 percent.

**Table 2. Year-on-Year Inflation Rates for All Income Households by Commodity Group, La Union: June 2019 and May – June 2020 (2012=100)**

Commodity Group	Inflation Rate		
	June 2020	May 2020	June 2019
Food and Non-Alcoholic Beverages	3.8	4.7	2.8
Alcoholic Beverages and Tobacco	18.6	16.7	6.7
Clothing and Footwear	3.3	3.3	1.4
Housing, Water, Electricity, Gas and Other Fuels	-3.4	-3.7	1.4
Furnishings, Household Equipment and Routine Maintenance of the House	3.0	2.7	3.2
Health	1.0	0.4	1.3
Transport	-4.5	-8.5	-1.3
Communication	0.3	0.3	0.6
Recreation and Culture	0.4	0.3	1.4
Education	0.0	0.2	-11.8
Restaurant and Miscellaneous Goods and Services	3.7	3.4	0.5

**PPP in La Union remains at PhP0.87 in June 2020**

The Purchasing Power of the Peso (PPP) in La Union was posted at PhP0.87 in June 2020, the same figure as of last month. This means that the purchasing capability of PhP1.00 in 2012 decreased by 13 centavos in June 2020. La Union's PPP was recorded at PhP0.89 in the same month a year ago.

**Figure 4. Purchasing Power of the Peso in La Union  
June 2019 – June 2020  
(2012 = 100)**

In 2019, the PPP in La Union was recorded at PhP0.89 in June. It decreased to PhP0.88 in July and remained until August. It went up to PhP0.89 in September but again decreased to PhP0.88 in October. The province's PPP remained at PhP0.88 until December.

In 2020, the PPP in the province was stable at PhP0.87 from January to June.

**Figure 5. Purchasing Power of the Peso in La Union and Ilocos Region  
June 2019 – June 2020  
(2012 = 100)**

La Union's PPP in June 2020 was higher than Ilocos Region's PPP of PhP0.82. The region's PPP was posted at PhP0.82 in May 2020 and at PhP0.84 in June 2019.

## TECHNICAL NOTES

The Philippine Statistics Authority (PSA) generates and announces the monthly Consumer Price Index (CPI) based on a nationwide survey of prices for a given basket of goods and services.

The **CPI** is an indicator of the change in the average retail prices of a fixed basket of goods and services commonly purchased by households relative to a base year. It shows how much on the average, prices of goods and services have increased or decreased from a particular reference period known as base year. It also serves as a basis for economic analysis, collective bargaining agreements, for wage adjustments, and for monitoring the effects of government economic policy on households.

## **Rebasing of CPI to Base Year 2012 and Adopting the Chain Method in the 2012-based CPI**

The PSA released the CPI for All Income Households with base year 2012 on 06 March 2018. The 2012-based CPI is the tenth in the rebasing series. This was announced in Press Release Number 2018-031 dated 22 February 2018. Two sets of the CPI, 2006-based and 2012-based series were issued simultaneously until June 2018. The CPI series for July 2018 onwards shall be 2012-based.

### **1. Identification of the Base Year**

The base period is the period, usually a year, at which the index number is set to 100. It is the reference point of the index number series. The CPI is now rebased to 2012 base year from the current 2006 base year.

**2012**

The year 2012 was chosen as the next base year because it was the latest year when the Family Income and Expenditure Survey (FIES) results were made available. It is also in accordance with PSA Board Resolution No. 1, Series of 2017-146, which approved the synchronized rebasing of the price indices to base year 2006 and every six (6) years thereafter.

### **2. Determination of the Market Basket**

Market basket refers to a sample of goods and services, which is meant to represent the totality of all goods and services purchased by households relative to a base year.

Determining the right market basket is crucial because inadequate representation of the typical basket will give wrong signals as to the behavior of prices, a very important factor in economic planning.

To determine the commodities that will form the market basket for the 2012-based CPI, the updating of the 2006 basket through the Survey of Key Informants was conducted from 07 October to 15 November 2013. The survey was conducted nationwide to store managers, sellers or proprietors and were asked of the most commonly purchased items or commodities. The commodities are grouped according to the 2010 Philippine Classification of Individual Consumption According to Purpose (COICOP) which is based on the United Nations COICOP.

### **3. Determination of the Household Consumption Patterns (Weights)**

This activity involves assigning weights to the commodity groups/sub-groups. This reflects the consumption priorities of households and the way they allocate resources to meet their needs. Weight is a value attached to a commodity or group of commodities to indicate the relative importance of that commodity or group of commodities in the market basket.

The weights for the 2012-based CPI were derived from the expenditure data of the 2012 FIES, a survey that covered around 50,000 sample households nationwide. The weight for each item of expenditure is a proportion of that expenditure item to the total national expenditure. The total (all items) national expenditure weights is equal to 100.

The 2012 FIES expenditure data were used to directly estimate the 2012 CPI weights at the national and regional levels. However, the 2012 FIES estimates for the expenditure data at the provincial level were not directly utilized in estimating the CPI expenditure weights as the data at the provincial/city level may not be reliable with the use of the households' master sample (MS) that was utilized in selecting the 2012 FIES sample households. The MS was drawn using regions as domains in generating estimates in all the household surveys of the PSA starting July 2003.

The provincial/city expenditure data were derived using the model-based method in small area estimation procedures using the regional expenditure data as the control total for all the expenditure data within the specific region. Using these estimates, the weight for each item of expenditure is computed as a proportion of that item of expenditure to the total national expenditure. A raking procedure was done to adjust the weights of the provinces so that the provincial weights when added up will equal to the regional weights.

#### **4. Monitoring of Prices of Items in the Market Basket**

This involves establishing baseline information for prices of the items in the base year and monitoring the prices of the items on a regular basis. Collection of data for the CPI is done by the provincial staff of the PSA. Except for food, beverage and tobacco (FBT) in the National Capital Region(NCR) and petroleum products which are monitored on a weekly basis, price collection is generally done twice a month. First collection phase is done in the first five days of the month while the second phase is on the 15<sup>th</sup> to 17<sup>th</sup> day of the month. Data are collected from the sample outlets (outlets or establishments where prices of commodities/services are collected or quoted) which were chosen using the following criteria:

- a. Popularity of an establishment along the line of goods to be priced – this means the sample outlet is publicly noted in the locality for selling goods included in the CPI market basket and the outlet is patronized by a large segment of the population.
- b. Consistency and completeness of stock

*Consistency of stock* – the outlet has a constant, steady or regular stock of commodities listed in the CPI price collection forms as well as of those commodities of the same kind and belonging to the same commodity group.

*Completeness of stock* – the sample outlet carries in its stock many if not all of the items included in the CPI price collection forms relative to the other outlets in the area.

- c. Permanency of outlet – the outlet is an established store or stall in the market area. It should not be an ambulant or transient vendor in order that the collection of data can be done for the succeeding survey rounds.
- d. Geographical location – the outlet is conveniently located and is accessible to the majority of consumers in the area.

## 5. Computation of the CPI

The PSA employed the weighted arithmetic mean of price relatives and the “Chain” method to provide timely indicators since this method allows the inclusion or exclusion of commodities in the market basket to address the changing consumer taste and preferences and technological changes. Below are the steps in the computation of CPI using the 2012 as the base year:

**Step 1: Compute the monthly average price for each commodity.**

$$\text{Monthly Average Price of Commodity} = \frac{\text{Outlet 1 (1}^{\text{st}} \text{ Phase) Price} + \text{Outlet 1 (2}^{\text{nd}} \text{ Phase) Price} + \text{Outlet 2 (1}^{\text{st}} \text{ Phase) Price} + \text{Outlet 2 (2}^{\text{nd}} \text{ Phase) Price} + \text{Outlet 3 Price} + \text{Outlet 4 Price} + \text{Outlet 5 Price} + \text{Outlet 6}}{8}$$

**Step 2: Compute the price relative (PR) for each commodity.**

$$\text{PR} = \frac{\text{Current Month Average Price}}{\text{Previous Month Average Price}}$$

**Step 3: Compute the index for the 5-digit group (Sub-Class).**

Step 3.1: Compute the geometric mean of PRs for each 5-digit group.

$$\text{GM}_{\text{PR}} = \left( \prod_{i=1}^n \text{PR}_i \right)^{1/n}$$

Where:

$\text{GM}_{\text{PR}}$  = Geometric mean of price relatives

$\text{PR}_i$  = Price relative of each commodity

$n$  = number of commodities under the 5-digit group

Step 3.2: Compute the index for 5-digit group.

$$I_{\text{5-digit,current month}} = (\text{GM}_{\text{PR}}) * (I_{\text{5-digit,previous month}})$$

Where:

$I_{\text{5-digit,current month}}$  = Index of the 5-digit group (sub-class) for the current month

$\text{GM}_{\text{PR}}$  = Geometric mean of price relatives

$I_{\text{5-digit,previous month}}$  = Index of the 5-digit group (sub-class) for the previous month

**Step 4: Compute the index for the 4-digit group (Class).**

$$I_{4\text{-digit}} = \frac{\sum_{i=1}^n (W_{(5\text{-digit})i}) (I_{(5\text{-digit})i})}{\sum_{i=1}^n (W_{(5\text{-digit})i})}$$

Where:

$I_{(4\text{-digit})}$  = index of the 4-digit group  
 $W_{(5\text{-digit})i}$  = weight of 5-digit group  
 $I_{(5\text{-digit})i}$  = index of the 5-digit group

**Step 5: Compute the index for the 3-digit group (Group).**

$$I_{3\text{-digit}} = \frac{\sum_{i=1}^n (W_{(4\text{-digit})i}) (I_{(4\text{-digit})i})}{\sum_{i=1}^n (W_{(4\text{-digit})i})}$$

Where:

$I_{(3\text{-digit})}$  = index of the 3-digit group  
 $W_{(4\text{-digit})i}$  = weight of the 4-digit group  
 $I_{(4\text{-digit})i}$  = index of the 4-digit group

**Step 6: Compute the index for the 2-digit group (Division).**

$$I_{2\text{-digit}} = \frac{\sum_{i=1}^n (W_{(3\text{-digit})i}) (I_{(3\text{-digit})i})}{\sum_{i=1}^n (W_{(3\text{-digit})i})}$$

Where:

$I_{(2\text{-digit})}$  = index of the 2-digit group  
 $W_{(3\text{-digit})i}$  = weight of the 3-digit group  
 $I_{(3\text{-digit})i}$  = index of the 3-digit group

**Step 7: Compute the index for All Items.**

$$I_{\text{all items}} = \frac{\sum_{i=1}^n (W_{(2\text{-digit})i}) (I_{(2\text{-digit})i})}{\sum_{i=1}^n (W_{(2\text{-digit})i})}$$

Where:

$I_{\text{all items}}$  = index for All Items  
 $W_{(2\text{-digit})i}$  = weight of the 2-digit group (Division)  
 $I_{(2\text{-digit})i}$  = index of 2-digit group (Division)

## ***Economic Indicators Derived from the CPI***

Two important indicators, the inflation rate and PPP, are derived from the CPI which are important in monitoring price stability and the value of the country's currency.

**Inflation Rate** is the annual rate of change or the year-on-year change of the CPI expressed in percent. The formula is:

$$\text{Inflation Rate} = \frac{\text{CPI}_2 - \text{CPI}_1}{\text{CPI}_1} \times 100$$

Where:  $\text{CPI}_2$  – is the CPI in the second period  
 $\text{CPI}_1$  – is the CPI in the previous period

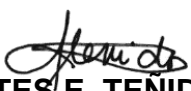

**Headline Inflation** is the rate of change in the weighted average prices of all goods and services in the CPI basket while **Core Inflation** refers to the rate of change in the CPI that excludes the following item/commodity groups: rice, corn, fruits and vegetables, and fuel items.

The **PPP** measures the real value of the peso in a given period relative to a chosen reference period. It is computed by getting the reciprocal of the CPI and multiplying the result by 100.

$$\text{PPP} = \frac{1}{\text{CPI}} \times 100$$
